

All DTI projects (except for 4) posted prior to the crisis shut were postponed to the end of June. This was done to allow DTI staff to send employees home giving them time to regroup. Now that this has happened all DTI staff are back to work from home full time with the exception of a small group going into the office occasionally. The Projects that were still scheduled to be opened were the 9 school modular, Kings Landing retrofit, the Centennial bridge and an electrical upgrade to NBCC Moncton. Now that all DTI staff and the design community are back to work these tenders will soon be rolling out again, however, every project will still be posted on CiNet but without any hard copy drawings and or speck books. Then the tenders will only be bid electronically to eliminate all paper transfers.

Mr. John Landry
